STONEVILLE 2-B

PLANT THE COTTON THE MILLS PREFER

PLANT TYPE—Medium vigorous, spreading and prolific.

BOLL SIZE—Large, 60 to 70 per pound of seed cotton.

MATURITY—Early, one of the few early, maturing big boll cottons.

PICKING QUALITIES—Excellent—Large fluffy bolls, opens well.

Has high percentage of five lock bolls.

STAPLE LENGTH—Valley Lands—1-1/16 to 1-1/8 inch.

High Lands—1 to 1-3/32 inch.

LINT PERCENTAGE—Valley Lands—34 to 36%.

High Lands—35 to 38%

LINT CHARACTER—Fine fibre, very strong, hard and uniform.

FOILAGE—Medium Light.

STORM PROOFNESS—Good.

SEED SIZE—Average 3500 per pound.

SEED MILLING VALUE—Very high—See table on back of sheet.

For twenty years, since the first selections of the Stoneville strains were made, we have endeavored to improve them by selection only. To the old No. 2 strain we have added the 2-A and more recently the 2-B, both of which were meritorious selections. This year we have in production our selection No. 8275, which will be sold as 2-B, following up our policy of improving our established strains without confusing the public by continually offering new strain numbers.

This strain is very uniform in plant type, has wide spreading branches, a fine round boll and slightly better lint percentage than our former strains of 2-B. Laboratory tests of the past three years productions show a high degree of uniformity of staple fibre lengths and an unusually high bundle or tensile strength, with low percentage of mill waste.

It has been outstanding in yields of seed cotton and lint per acre in our own tests and in the official tests where it has been included at several Experiment Stations. We offer it with full confidence that it will please both the growers of fine cotton and the mills that want uniformity in both length and strength of fibre.
